~~6,283,313~~ 6,282,313 to McCarthy et al entitled "Using a Set of Residual Images to Represent an Extended Color Gamut Digital Image", describe a method for representing a digital image having color values with an extended color gamut by adjusting the color values of an extended gamut image to form a limited color gamut digital image and determining a set of residual images to represent the difference between the extended color gamut digital image and the limited color gamut digital image. The residual images and the limited color gamut digital image can then be used to form a reconstructed extended color gamut digital image.
